

Tree plantation

A tree is the key to a pollution free environment for a long time because they are responsible for providing oxygen ,improving the quality of air, climate amelioration, conserving water, soil preservation, and supporting wildlife. Due to all these reasons tree plantation has become necessary in the present scenario as pollution is at a peak. Tree plantation is the only way to stop pollution to some extent. A “Mega Tree Plantation Drive” was conducted in schools of Haryana by “Youth Clubs & Eco Clubs”. All the students and teachers participated in this program in our school. The aim of the program was participation of each and every child. In this campaign “One Tree,One Child” strategy was adopted. The students were motivated to feel connected with his or her plant, emotionally and inspired to ensure its survival. Students were advised to select for planting two categories of perrinial and traditional plants i.e. herbal plants and medicinal plants. We started planting saplings in the garden of our school campus and after that we planted saplings in the nearby local area of our school. Students also made some posters and banners on the importance of tree plantation. The tree plantation drive conducted in our school was a great success and helped to create awareness among students about the importance of trees for environment , it also encouraged them to actively participate in such events and take steps towards a greener future. The school’s Eco Club plans to organise more such events in the future with the aim of creating a sustainable and eco-friendly environment.
